

Google Chrome

When I print a webpage it come out too small or too big. How do I make it normal size?

In chrome when you are printing there is an option to change the scale of the printing. This setting can often get modified to change the size of the printing and make either too large or too small.

To locate this scroll down on the left hand side to more settings and click to expand.

The screenshot shows the Google Chrome print dialog box. At the top, it says "Print" and "Total: 1 sheet of paper". Below this are two buttons: "Print" (blue) and "Cancel" (white with blue border). A horizontal line separates this from the settings section. The settings section includes: "Destination" with a printer icon and the text "NPI26151E (HP Las" followed by a dropdown arrow; "Pages" with a dropdown menu showing "All"; "Copies" with a text input field containing "1"; and "Layout" with a dropdown menu showing "Portrait". Another horizontal line follows. Below this line is the text "More settings" followed by a downward-pointing chevron icon. A final horizontal line is at the bottom. Below this line is the text "Print using system dialogue... (Ctrl+Shift+P)" followed by an external link icon (a square with a diagonal line).

It will then look like this.

Google Chrome

Print

Total: 1 sheet of paper

Print

Cancel

Destination

 NPI26151E (HP Las ▼

Pages

All ▼

Copies

1

Layout

Portrait ▼

More settings

^

Paper size

1 ▼

Margins

Default ▼

Quality

600 dpi ▼

Scale

Default ▼

As you can see there is a scale option make sure this says default not customised. If

Google Chrome

it says customised change it to default and this should return the size back to default.
